Congratulations for buying a Country Clipper product. Your Country Clipper Zero Turn Radius Riding Mower was designed and built to provide long and trouble free service. Keep in mind that it, like any other mechanical device, can be potentially dangerous if used improperly, and hazard control and accident prevention are dependent upon the awareness, concern, prudence, and proper training of personnel involved in the operation, transport, maintenance, and storage of the equipment. Study this manual and pay special attention to the important Safety Precautions on pages 3-5. Following these instructions will help you continue to enjoy the trouble-free performance expected of the Country Clipper product.

ACCIDENT PATTERNS TO AVOID

I. CONTACT WITH THE ROTATING BLADE -- This accident usually happens when the operator is clearing the discharge chute of grass, (especially when the grass is wet), or when the operator adjusts the machine without turning it off and waiting for the blades to completely stop.

II. PROPELLED OBJECTS -- Sticks, rocks, wires, and other objects can be propelled out through the discharge chute or from under the mower housing. Bystanders are particularly vulnerable.

III. GRASS CATCHER OR GUARD -- The mower shall not be operated without either the entire grass catcher or guard in place.

IV. OVERTURNING -- This happens when riding mowers are used on steep slopes, embankments or hills. The operator in these cases can come in contact with the blades or sustain injuries during a fall.

V. MOWER RUNNING OVER THE VICTIM -- This usually happens when a riding mower is driven in reverse. The accident victims are most often young children whom, unseen by the operator of the mower, were in the area being mowed.

SAFETY INSTRUCTIONS AND RECOMMENDATIONS

1. PEOPLE WHO OPERATE, SERVICE, OR ARE OTHERWISE ASSOCIATED with the Country Clipper Zero Turn Radius Mower should be trained in its proper use and warned of its dangers. Before operating, adjusting, or servicing the Country Clipper Zero Turn Radius Mower they should read and understand this entire manual and the engine owner's manual.

2. AVOID CONTACT WITH MOVING PARTS. Keep hands and feet from under mower deck and away from blades at all times. Turn engine (motor) off if you must unclog the chute.

3. AVOID HILLS AND SLOPES. Use extreme caution when mowing up or down slopes. NEVER mow across the face of a slope. If a slope must be ascended, back up the slope; drive forward when descending. Reduce speed and use caution to start, stop and maneuver. To prevent loss of control on a slope avoid sharp turns, sudden changes in direction, and sudden stops and starts.

4. DISENGAGE POWER TO MOWER BEFORE BACKING UP. Do not mow in reverse unless ABSOLUTELY necessary and then only after turning around and observing the entire area behind the mower. Go slowly. Most “running over victim” accidents occur in reverse.

5. BEGINNING OPERATORS SHOULD LEARN HOW TO STEER the Country Clipper Zero Turn Radius Mower before attempting to mow. Start with slow engine speed and drive without the blades engaged in an open area until comfortable with the machine.

6. KNOW HOW TO STOP QUICKLY. Know the location and operation of every control, especially how to brake and how to disengage the mower blades.
7. **DO NOT MOVE CONTROL LEVER(S)** from forward position to reverse position rapidly. The speed and/or direction of travel is affected instantly by movement of the Control Lever(s).

8. **DO NOT ALLOW CHILDREN TO OPERATE MOWER.** Do not allow others who have not had instruction to operate mower.

9. **ALWAYS TURN ENGINE OFF AND REMOVE KEY** before leaving the mower to prevent children and inexperienced operators from starting the engine. Never leave the mower unattended with engine running. Always wait for all moving parts and all sounds to stop before leaving operator’s seat.

10. **WEAR STURDY, ROUGH-SOLED WORK SHOES AND CLOSE-FITTING SLACKS AND SHIRTS.** Never operate mower in bare feet, sandals or sneakers.

11. **KNOW THE AREA YOU ARE TO MOW.** Watch for hidden danger such as rocks, roots, sticks, holes, bumps, and drop-offs, etc. Before mowing, pick up all debris in area to be mowed. Sharp and hard objects can be propelled at a high speed and can act like shrapnel. Walk through tall grass before mowing to make sure there are no hidden dangers. Mow higher than desired in tall grass to expose any hidden objects and/or obstacles, clean the area, and then mow to the desired height.

12. **NEVER REFUEL A MOWERindoors.** Allow the engine time to cool before refueling. Unseen vapors may be ignited by a spark. Always clean up spilled gasoline. Never run the engine indoors in a garage or any other closed building. Allow engine to cool before storing in any enclosure. The engine exhaust and gasoline fumes are dangerous.

13. **DISENGAGE BLADES BEFORE DRIVING ACROSS WALKS or projecting objects.**

14. **NEVER REMOVE THE FUEL CAP** or add gasoline to a running or hot engine that has not been allowed to cool for several minutes after running. Always make sure the gas cap is in place.

15. **NEVER CARRY PASSENGERS.**

16. **DO NOT SMOKE AROUND THE MOWER** or the gasoline storage container. Gasoline fumes can easily ignite.

17. **KEEP GASOLINE IN A WELL-VENTILATED AREA** away from your living quarters and in tightly-capped safety cans. Never store mower with gasoline in the tank inside a building where fumes may reach open flame or spark.

18. **DISENGAGE BLADES, STOP ENGINE AND REMOVE IGNITION KEY** before any servicing. Be sure all moving parts and all sounds have stopped. Let engine cool and disconnect the spark plugs so the engine cannot start by accident. A SLIGHT ROTATION OF THE BLADES COULD START THE ENGINE.

19. **KEEP ALL NUTS, BOLTS, AND SCREWS TIGHT** to be sure equipment is in safe working condition, especially blade mounting bolts.

20. **MOWER SHOULD BE STOPPED AND INSPECTED FOR DAMAGE** after striking a foreign object and the damage should be repaired before restarting and operating the equipment. Stop immediately and check for damage or loose parts if mower should start vibrating.

21. **KEEP SAFETY DEVICES AND GUARDS IN PLACE.** If any of the safety switches become inoperable, have them repaired immediately.

22. **FOR PROPER USE OF ROLL OVER PROTECTION SYSTEM (R.O.P.S.)** reference manufactures instructions.

23. **DO NOT STEP OR STAND ON THE MOWER HOUSING.** Step or stand only on the foot deck.
24. **WATCH OUT FOR TRAFFIC** near roadways and when crossing roads.

25. **DO NOT USE MOWER WHEN GRASS IS WET OR SLIPPERY.**

26. **THIS MACHINE IS NOT MEANT FOR HIGHWAY OR STREET USE.** It is not a recreational vehicle and it should not be operated as such.

27. **ALWAYS DISENGAGE THE MOWER BLADE CLUTCH** when transporting.

28. **KEEP ALL SAFETY LABELS IN LEGIBLE CONDITION.** Remove grease, dirt, grass, etc. that may cover safety labels. Replace any safety label that is missing or damaged.

29. **WEAR PERSONAL PROTECTIVE EQUIPMENT.** Eye, ear, feet and head protection is recommended.

30. **ONLY USE COUNTRY CLIPPER APPROVED ACCESSORIES.**

31. **DO NOT CHANGE THE ENGINE GOVERNOR SETTING** or over speed the engine.

32. **BEWARE OF MOWER DISCHARGE DIRECTION** and do not point it at anyone.

33. **DO NOT OPERATE THE MOWER UNDER THE INFLUENCE OF ALCOHOL OR DRUGS.**

34. **USE CARE WHEN LOADING OR UNLOADING MACHINE INTO A TRAILER OR TRUCK.**

35. **USE CARE WHEN APPROACHING BLIND CORNERS,** shrubs, trees, or other objects that may obscure vision.

36. **CLEAN ALL GRASS AND DEBRIS FROM MACHINE TO PREVENT FIRES.** Remove spilled oil or gasoline.

37. **KEEP HANDS AND FEET AWAY FROM MOVING PARTS.** If possible do not make adjustments with the engine running.

38. **NEVER MOW WHEN OTHER PEOPLE OR PETS ARE IN THE AREA.**

39. **CAREFULLY RELEASE PRESSURE FROM COMPONENTS WITH STORED ENERGY.**

40. **USE CARE WHEN REPLACING BLADES.** Wrap the blade(s) or wear gloves, and use caution when servicing them. Only replace blade(s). Never straighten or weld blade(s).

41. **USE JACK STANDS TO SUPPORT COMPONENTS** when required.

<br>
**SAFETY INTERLOCK SYSTEM**

Your *Country Clipper* Zero Turn Radius Mower is equipped with switches interlocked for your safety.

GROUND DRIVE NEUTRAL IS WHEN THE JOYSTICK (CONTROL LEVER) IS IN THE “DOWN” POSITION.

1. The mower blades must be disengaged and the Joystick Control Lever must be in the neutral position before the engine will start.

2. The engine will stop if the mower blade clutch is engaged when the operator leaves the driver’s seat.

3. The engine will stop if the Joystick Control Lever is not in the neutral position when the operator leaves the driver’s seat.

4. The engine will stop if the brake is “SET” and the Joystick Control Lever is not in the neutral position.

5. The engine will stop if the mower blade clutch is engaged while operator is not in the seat.

---

**DO NOT OPERATE MOWER IF SAFETY SWITCHES AND GUARDS ARE NOT OPERATING PROPERLY**
START UP AND OPERATION

CHECKLIST BEFORE OPERATION

1. Make sure fuel tank is full. Use regular unleaded gasoline (see engine owner’s manual for more details).

WARNING

HANDLE GASOLINE WITH CARE -- IT IS HIGHLY FLAMMABLE. DO NOT SMOKE. ENGINE SHOULD BE OFF AND COOL. USE APPROVED GAS CONTAINER. NEVER FILL TANK INDOORS. WIPE UP ANY SPILLS. REPLACE CAP TIGHTLY.

2. Make sure dirt and foreign matter is kept out of gas tank. Use a clean funnel and gas can.

3. Do not mix oil with gasoline.

4. Do not use white, high test or premium gasoline. Do not use de-icers, carburetor cleaners, or other such additives (Use fuel recommended by Engine Mfg.).

5. Check the crankcase oil level. Make sure the engine is off. The mower should be parked on a level area. Do not overfill. (See your engine manual for more detailed instruction.)

6. Check battery fluid level.

7. Inspect V-belts.

8. Check tire pressure:

9. Make sure underside of mower deck is free of grass.

10. Make sure mower blades are sharp and secured tightly.

11. Clean the air intake screen on the engine if necessary.

12. Perform any other maintenance as it becomes necessary. (See the "Maintenance" section of this manual.)

13. If equipped with R.O.P.S. (Roll Over Protection System) reference manufactures instructions.

IMPORTANT: Before cutting grass, clutch must be broken-in as follows: With engine at full RPM engage deck until blades come to full speed and then disengage until blades come to a complete stop. Repeat 10 times to "break-in" the clutch properly.

CONTROL LOCATION

JOYSTICK MODELS

- Throttle
- Choke
- Joystick Control Lever
- Ignition Key
- Blade Clutch Switch
- Parking Brake Lever
- Cut Height Adjust. Lever
- Cut Height Foot Assist Lever
- Cut Height Stop Pin

IMPORTANT:

Before cutting grass, clutch must be broken-in as follows: With engine at full RPM engage deck until blades come to full speed and then disengage until blades come to a complete stop. Repeat 10 times to "break-in" the clutch properly.
WARNING
AVOID INHALING EXHAUST FUMES!
CARBON MONOXIDE GAS IS COLORLESS,
ODORLESS AND CAN CAUSE
UNCONSCIOUSNESS AND IS POTENTIALLY
LETHAL. DO NOT RUN LAWN MOWER IN
GARAGE OR OTHER CONFINED AREAS.

OPERATION
JOYSTICK MODELS

1. MOVE JOYSTICK CONTROL LEVER to
   neutral “DOWN” position.

2. SET PARKING BRAKE. Pull up to set.

3. DISENGAGE MOWER BLADE CLUTCH by
   moving clutch switch to “OFF” position.

4. PULL ENGINE CHOKE CONTROL to full
   position for cold starts.

5. SET ENGINE THROTTLE TO 1/2
   THROTTLE.

6. TURN IGNITION KEY to “START” position
   and release to “RUN” as soon as engine
   starts. NOTE: Prolonged cranking will
   damage starter motor and shorten the
   battery life

7. ADJUST ENGINE THROTTLE for desired
   engine smoothness and speed. However,
   use full throttle while mowing.

8. RELEASE PARKING BRAKE. Push brake
   lever down to release.

9. TO DRIVE:
   A. Move the Joystick Control Lever to the
      “UP” position.
   B. Move the Joystick Control Lever
      forward to move forward. Increasing
      forward movement of the Joystick
      Control Lever will increase the speed
      of travel.
   C. To reverse the direction, pull the
      Joystick Control Lever slightly back.
   D. To turn, move the Joystick Control
      Lever toward the direction you want to
      turn.
   E. To turn on a zero radius axis, go
      slowly and move the Joystick Control
      Lever to the side you wish to turn and
      slightly to the rear at the same time.

CAUTION
FOR SMOOTH, SAFE OPERATION, MOVE
THE JOYSTICK CONTROL LEVER IN A
GENTLE, SLOW MOTION. NEVER PULL OR
PUSH THE JOYSTICK CONTROL LEVER
RAPIDLY, ESPECIALLY ON GRADES.

10. BRAKING: To brake mower, gently move
    the Joystick Control Lever in the direction
    opposite to travel. Note: If the parking brake
    is engaged with the Joystick Control Lever in
    the “UP” position the engine will stop.

11. CUTTING HEIGHT ADJUSTMENT: While
    holding the Cut Height Adjustment Lever
    with enough hand pressure to freely move
    the Cut Height Pin, rotate the Cut Height
    Stop Pin so the key on the pin aligns with the
    key slot, then pull it out and move the Cut
    Height Adjustment Lever to the desired cut
    height. Reinsert the Cut Height Stop Pin.

12. ENGAGE MOWER BLADE CLUTCH: Set
    engine throttle to 1/2–3/4 throttle, engage
    the Blade Clutch Switch to the “ON” position,
    set throttle to full. Note: The engine will not
    start with the blade clutch switch in the “ON”
    position. Engine will stop if the clutch switch
    is “ON” and the Operator is not in the seat.

IMPORTANT:
Until the operator is familiar with the
Country Clipper Zero Turn Radius
Mower, he/she should follow these
recommendations: 1) Disengage the
mower blades. 2) Go very slowly until
thoroughly familiar with the machine.
3) Keep away from fences, buildings,
and other obstructions. 4) Move the
Joystick Control Lever smoothly and
slowly. 5) Practice until operation is
smooth and efficient.
13. TO STOP:

A. Move Joystick Control Lever to neutral position and then to the “DOWN” position.
B. Disengage the mower blade clutch by moving the clutch to the “OFF” position.
C. Set the parking brake.
D. Turn ignition key to “OFF” position.
E. Remove the key and wait for all movement and sound to cease before dismounting.

NOTE: The tractor should never be pulled at more than 2 miles per hour or for any appreciable distance.
MOWING RECOMMENDATIONS

1. Keep mower blades sharp.

2. Make sure deck and discharge are clean.

3. When mowing tall grass, make two passes. Mow off ½ of the desired cut on the first pass, and then the desired height the second pass. Check for hidden dangers.

4. Go slowly for trimming.

5. Always cut grass with the engine at full throttle speed.

NOTE: Operating the engine at full throttle assures that the cutting blades are operating at optimum cutting speed. Control ground speed with the Control Lever(s).

6. Vary ground speed to suit conditions (i.e. go slower in tall thick grass, on hills, wet conditions, etc.).
**MAINTENANCE**

<table>
<thead>
<tr>
<th>Maintenance Service Interval</th>
<th>Maintenance Procedure</th>
</tr>
</thead>
</table>
| Before Each Use or Daily     | - Check Engine Oil Level.  
                              | - Check Mower Blades.         
                              | - Check Operator Presence Control System.  
                              | - Check for Loose Hardware.         
                              | - Clean Engine Cooling System.      
                              | - Remove Debris From Engine.        
                              | - Remove Debris Build-Up Hydrostatic Transmission |
| After Each Use or Daily      | - Clean Grass Build-Up from Deck Cutting Chamber. |
| After First 5 Hours          | - Change Engine Oil.         
                              | - Check Wheel Lug Nuts. (75 ft/lbs or 102 Nm)  
| After First 75 Hours         | - Change Hydrostatic Transmission Oil & Filter (see pg. 14-15) |
| Every 10 Hours               | - Check Wheel Lug Nuts. (75 ft/lbs or 102 Nm)  
                              | - Check Tire Pressure. (12-15 Psi / 83-103 kPa)  
                              | - Check Battery Fluid            
                              | - Sharpen Mower Blades           |
| Every 25 Hours               | - Service Air Cleaner. (Increase Frequency Under Severe Conditions. See Engine Owner's Manual for additional information.)  
                              | - Check Wheel Lug Nuts. (75 ft/lbs or 102 Nm)  
| Every 50 Hours               | - Check Hydraulic Oil Level.  
                              | - Check Drive Belt Condition.     
                              | - Check Engine RPM (3500-3600 rpm) |
| Every 100 Hours              | - Change Engine Oil & Filter. (Increase Frequency Under Severe Conditions. See Engine Owner's Manual for Additional Information.)  
                              | - Remove Engine Shrouds & Clean Cooling Fins.       
                              | - Check Spark Plug                |
| Every 400 Hours              | - Change Hydrostatic Transmission Oil & Filter (see pg. 14-15) |
| Every 500 Hours Or Annually  | - Grease Front Caster Pivots    
                              | - Replace Air Filter Element      
                              | - Check Spark Plugs               
                              | - Service Battery                 |

Replace Safety decals when illegible. Write factory for free replacement.
MAINTENANCE INSTRUCTIONS

1. ENGINE:

For complete maintenance and operating information for your engine, please refer to your engine operating and maintenance instructions furnished by the engine manufacturer and included in your Country Clipper Zero Turn Radius Mower information packet.

NOTE: Air intake screen must be kept clean. If plugged, engine may be seriously damaged by overheating.

2. BATTERY:

![CAUTION]

BATTERY ELECTROLYTE IS A POISONOUS AND CORROSIVE SULFURIC ACID SOLUTION. AVOID SPILLING ON SKIN, EYES, AND CLOTHING.

Keep the electrolyte level above the plates in each cell by adding distilled water as it becomes necessary. Add water just before operating the mower to mix the water with the solution. Be careful not to overfill the battery -- the electrolyte solution is corrosive and can cause damage to surrounding metal parts if it should spill. When taking the battery out of the mower for servicing, make sure to connect the cables to the battery exactly as they were prior to removal. Always disconnect the ground (-) wire first and always reconnect the ground (-) wire last.

Keep the battery clean. Remove the corrosion around the battery terminals by applying a solution of one part baking soda to four parts water. Coat all exposed terminal surfaces with a light layer of grease or petroleum jelly to prevent corrosion.

NOTE: At temperatures below 32 degrees F (0 degrees C) the full charge state must be maintained to prevent cell electrolyte from freezing and causing permanent battery damage.

3. TIRES:

Correct tire pressure is essential for efficient operation of the mower. Check tire pressure as requested in the maintenance schedule. Inflate tires to the pressures listed below:

<table>
<thead>
<tr>
<th>Model</th>
<th>Front tires</th>
<th>Rear tires</th>
</tr>
</thead>
<tbody>
<tr>
<td>All</td>
<td>12-15 psi</td>
<td>12-15 psi</td>
</tr>
<tr>
<td>Models</td>
<td>83-103 kPa</td>
<td>83-103 kPa</td>
</tr>
</tbody>
</table>

Lug nuts should be torqued to 75 ft/lbs and checked regularly for tightness.

4. MOWER BLADES:

Check sharpness of mower blades after every 10 hours of operation. To sharpen blades proceed as follows:

![CAUTION]

STOP ENGINE, REMOVE IGNITION KEY AND SPARK PLUGS FOR SAFETY.

A. Remove bolt and blade washer mounting blade on shaft. Remove blade.

B. Blades should be discarded when worn excessively.

C. Sharpen blades with a hand file, electric grinder or blade sharpener. Wear gloves and eye protection when sharpening. Grind blade at original 25 degree bevel.

D. Check balance of blade by positioning the blade on a nail or blade balance pedestal. Grind the blade on the end that is heavier until both sides balance.
E. Install blade, blade washer and bolt. Make sure to torque bolt to 100 ft-lbs.

5. V-BELTS:

All belts should be checked every 50 hours. Replace any belts found to be in poor condition. All belts are equipped with spring loaded belt tighteners and do not require tightening adjustments.

6. LUBRICATION:

A. Engine: Follow engine manufacturer’s recommendation.

B. Front Caster Pivots: Lubricate fittings with several pumps of multi-purpose grease from a grease gun. (See pg. 17)

7. PARKING BRAKE ADJUSTMENT:

A. Move Parking Brake Lever to the “OFF” position.

B. Adjust the top Adjustment Nut down or up so that the Brake Rod Arm is fully extended downward.

C. Move Parking Brake Lever to the “ON” position.

D. Adjust the Bottom Adjustment Nut so that the compression spring is compressed to 5/8”. (Repeat for other side).

D. On the outside (long) linkage that goes from the joystick to the right side transmission, loosen the jam nuts on both ends of the coupling nut. One of these is a left-hand thread. Rotate the coupling nut a couple turns to lengthen it.

**IMPORTANT:**

Use two wrenches (one on the nut and one on the coupling nut or rod end housing) when loosening or tightening jam nuts to prevent damaging the rod end ball joints!
E. Lift the joystick control handle out of the neutral position and hold it firmly in the full forward position. Now, by hand, rotate the coupling nut shortening the linkage until resistance is felt from the transmission control bottoming out in the transmission. Rotate the coupling nut back and forth a couple times to confirm, and mark this position.

F. Now rotate the coupling nut exactly one full turn longer and retighten the jam nuts. When retightening make sure that the ball joints on both top and bottom are well centered so that they do not bind up when moving the joystick handle to the extremes of its travel.

G. Now set the LH transmission speed. Reconnect the linkage to the left side transmission. (see left side transmission illustration on previous page).

H. Loosen the jam nuts on both ends of the left side transmission linkage. One of these is a left-hand thread. Now rotate the linkage rod a couple turns to lengthen it.

I. Hold the joystick control handle firmly in the full forward position. Rotate the left side transmission linkage rod to shorten the linkage until resistance is felt from the transmission control bottoming out in the transmission. Rotate the rod back and forth a couple times to be sure, and mark this position.

J. Now rotate the linkage rod exactly one full turn longer and retighten the jam nuts. Make sure that the ball joints on both top and bottom are centered.

NOTE: This full turn longer is required to prevent internal damage to the transmission.

K. Test drive the mower to check for tracking at full speed. If needed, slow the fast side by lengthening the control rod connected to the faster transmission. Use small adjustments of about ¼ turn. Replace the fender skirts when done.

2. SETTING NEUTRAL:

If, with the joystick handle in the DOWN or start position and the engine running the mower moves or travels, it is necessary to adjust neutral. Raise the drive wheels off the ground, secure the mower on blocks or jack stands and proceed as follows:

A. Remove the fender skirt on the joystick side. Loosen the two nuts on the bottom of the joystick neutral plate just enough so that the plate can move freely.
B. Start the engine. With the joystick still down, position the handle so both wheels are stationary.

C. Tighten the two nuts on the bottom of the neutral plate, being careful not to shift it out of position.

D. Recheck neutral before placing the mower back on the ground. Then shut off the engine and remove the mower from the blocks. Replace the fender skirt.

3. JOYSTICK CONTROL LEVER SENSITIVITY ADJUSTMENT:

To change the sideways turning response, adjust as follows:

A. Remove the right hand fender skirt exposing the Joystick Control Lever assembly.

B. Remove the cross bolt, nut, & spacers.

C. For quicker reacting steering place the long, silver colored spacers toward the inside of the rod end ball joints and the shorter, gold colored spacers on the outside of the ball joints. For slower reacting steering place the short, gold colored spacers on the inside and the longer, silver colored spacers on the outside. All 4 spacers must be used when reassembling.

HYDROSTATIC TRANSMISSIONS

Before each use, check to be sure that the cooling surfaces of the hydrostatic transmissions are clean. Excessive accumulation of oil, dirt, or trash may cause the transmissions to overheat.

NOTE: NEVER WASH ACROSS VENTED CAP WITH WATER OR STEAM.

It is essential that the unit exterior be free from debris prior to doing any fluid maintenance.

1. HYDROSTATIC TRANSMISSION FLUID CHANGE (CHALLENGER):

SAE 20W-50 engine oil has been selected for use by the factory and is recommended for normal operating temperatures. Each transmission holds a maximum of 74 oz of oil.
A. Set the park brake.

B. Open the by-pass valve.

C. Remove the oil filter.

D. Remove the top plug on the right side transmission (reinstall at 110-150 in-lbs)

E. Remove the side plug on the left side transmission (reinstall at 180-240 in-lbs)

F. After all the oil is drained out, replace the filter (use part # H-2567 when ordering from Country Clipper). Wipe off the filter base surface, apply a film of new oil to the gasket of the new filter and hand tighten ¾ to one full turn after the filter gasket contacts the filter base surface.

G. Refill the transmission with the recommended oil through the expansion tank. When the oil level in the transmission reached the top or side plug port reinstall the plug and continue filling until the “Full Cold” line is reached on the expansion tank. Refilling each transmission will take approximately 2 quarts of oil.

NOTE: Due to the effect air has on efficiency in hydrostatic drive, it is critical that it be purged from the system.

These purge procedures should be performed any time a hydrostatic system has been opened for maintenance or oil has been added to the system.

1. PURGING PROCEDURE

Oil Hydrostatic Transmission

NOTE: Before starting procedure make sure the transmission is at the proper oil level. If it is not, fill to specifications.

The following procedures should be performed with the vehicle drive wheels off the ground then repeated under normal operating conditions.

A. With the transmission in Free Wheel mode (see page 8 for details) and engine running, slowly move the directional control in both forward and reverse directions 5 to 6 times. As air is purged from the unit, the oil level will drop.

B. Re-engage the transmission and with the engine running, slowly move the directional control in both forward and reverse directions (5 to 6 times). Check the oil level, and add oil as required after stopping engine.

C. It may be necessary to repeat Steps A & B until all air is completely purged from the system. When the transaxle moves forward and reverse at a normal speed purging is complete.

IMPORTANT:
Failure to purge system properly may cause one or all of these symptoms: 1) noisy operation. 2) Lack of power or drive after short term operation. 3) High operation temperature and excessive expansion of oil.

NOTE: Before starting procedure make sure the transmission is at the proper oil level. If it is not, fill to specifications.
PROCEDURE FOR RAISING AND LOWERING THE DECK FOR SERVICING

1. RAISING THE DECK TO THE SERVICING POSITION:

   A. Remove Cut Height Adjustment Pin and completely lower the Cut Height Adjustment Lever. Re-insert the Cut Height Adjustment Pin immediately above Cut Height Adjustment Lever (this will lock the cut height adjustment lever into the lowest position).
   
   B. Carefully rotate the Deck Belt Tension Latch to release tension on the Deck Belt. Remove the engine to deck Drive belt from the clutch on the engine. Flip up the Front Step.
   
   C. On the right side of the mower, lift and hold up on the Hook Keeper (see pg. 20). Lift up on the Release Handle to disconnect the back of the deck. The Latch Plate should catch and hold the Release Handle rod in place. (To adjust the Latch Plate, see page 20)
   
   D. Position the Front Caster wheels so they are away from the deck (such as the tractor would be traveling in reverse).
   
   E. Lift the nose of the deck until the deck is standing near vertical (lifting can be made easier if someone stands on the rear bumper of the tractor)
   
   F. Release the Deck prop from its stowed position and place the free end against the deck lift casting as shown on page 18. Make sure the point of the prop falls within the center clearance area.

2. RETURNING THE DECK TO THE OPERATING POSITION:

   A. Place the Deck Prop back in the stowed position.
   
   B. Push the bottom (back) of the deck towards the rear of the tractor. Lower the deck until it rests on the ground.
   
   C. Lift up on the Latch plate to release the Release handle Rod. Push down on the Release handle until Deck Hooks lock into place.
   
   D. Install the engine to deck belt onto the clutch on the engine.
   
   E. Ensure that the engine to deck drive belt is installed onto all of the pulleys and idlers in the drive train. Carefully rotate the Deck Belt Tension Latch to re-tension the Deck Belt.
   
   F. Lower the Foot Deck down into the operation position. Lower the Front Step.

IMPORTANT NOTE: TO SECURE THE DECK, MAKE SURE THAT THE DECK IS LIFTED FAR ENOUGH TO ALLOW THE DECK PROP TO ENGAGE THE DECK LIFT CASTING.
MOWER SHOWN IN OPERATING POSITION.

- Cut Height Adjustment Lever
- Cut Height Adjustment
- Foot Deck
- Flip Front Step Up
- Front Caster Pivot Grease Zerk
- Latch Plate
- Hook Keeper
- Deck Hook
- Engine to Deck Belt Removed from Clutch
- Deck Prop

MOWER SHOWN IN SERVICING POSITION.

- Deck raised to service position
- Front Caster Wheels positioned out of the way.
SECURING THE DECK PROP

Deck Prop shown in the “Stowed” position.

Deck Prop being placed against the Deck lift casting.

Deck Prop securely in place against Deck lift casting.
LEVELING THE DECK

NOTE: The Deck has been leveled at the Factory.
If leveling is needed, use the following procedures.

1. Move the tractor to a hard surface (i.e. concrete or blacktop)

2. Set the tire pressure on each of the four tires to 12-15 psi/83-103 kPa (make sure all four tires are equal).

3. Set the deck cutting height to the highest position and rotate the two outside blades by hand until one end of each outside blade points forward (toward the front of tractor)

4. Measure from the ground to the front blade tip of each outside blade. These measurements should be within 1/8” of each other. (NOTE: To simplify this measuring, an optional Blade Measuring tool, part Number 629-374A is available from your local “Country Clipper” Dealer)

5. If adjustment is needed, loosen the jam nut(s) of the Deck Hanger Bolt(s) and adjust the Deck Hanger Bolt(s) up or down accordingly. It may be necessary to adjust both the front and rear Deck Hanger Bolts for a given side.

6. Once the side to side cut height is within tolerance, measure from the ground to the blade tip at the rear of each outside blade. This measurement should be between 1/8” and ¼” higher from the ground than the front of the blade from the ground on the corresponding side of the deck. Adjust rear and/or the front deck hangers accordingly to obtain the proper measurement. Re-measure the side to side cutting height to confirm that they are still within 1/8” of each other at the front of the blade.

6. Confirm that the deck is hanging firmly on ALL four deck hanger bolts. Readjust any loose Deck Hanger Bolts accordingly.

7. Once all of the above measurements are confirmed, tighten ALL jam nuts on the Deck Hanger Bolts. Failure to tighten can result in an un-level cutting deck and/or lost Deck Hanger Components.
ADJUSTING THE LATCH PLATE

1. Level the deck before proceeding to adjust the latch plate. (Follow instructions on previous page.) Pin the deck in the lowest position before proceeding to adjust the latch plate.

2. Lift up on the hook keeper, while pulling up on the release handle. This will disconnect the rear of the deck.

3. Loosen nuts on the adjustment of the latch plate using a 7/16 wrench. Pull up on the release handle as far as it will allow. Slide adjustment back or forward to where the latch plate will catch the release handle rod at its highest location. Tighten nuts back.

4. Lift up on latch plate and push down on the release handle to lock deck hooks in place.

5. Double check the latch plate adjustment by releasing the deck hangers and pulling up on the release handle. If the latch plate catches the release handle rod, no further adjustment needs to be made. If it does not, follow steps 3-5, as needed.
1. **ENGINE WON'T TURN OVER:**
   - Mower blades engaged .......................................................... disengage blades
   - Drive not in neutral ......................................................... move Control Lever(s) to neutral position
   - Blown fuse ................................................................. replace fuse
   - Dead battery ............................................................... charge or replace
   - Solenoid ................................................................. consult dealer
   - Ignition switch ........................................................... consult dealer
   - Starter ................................................................. consult dealer

2. **ENGINE WILL TURN OVER BUT WON'T START:**
   - No gas ........................................................................................................ refuel
     clean or replace fuel filters
   - Over or under choked .......................................................... adjust choke
   - Spark plug not firing ........................................................ check spark plug
     condition and reset gap*
   - Carburetor maladjustment ................................................. reset carburetor adjustment*
   - Ignition switch ........................................................... consult dealer

3. **HARD TO START ENGINE:**
   - Fuel line clogged .......................................................... clean fuel line and check fuel filter
   - Faulty fuel pump .............................................................. consult dealer
   - Spark plug wire loose or grounded ................................ check spark plug wires
   - Spark plug(s) faulty or improperly gapped ................................ check spark plug
     condition and reset gap*
   - Electronic ignition defective ........................................... consult dealer
   - Dirty or maladjusted carburetor ...................................... readjust carburetor*
     consult dealer for carburetor service

4. **ENGINE STARTS BUT CUTS OUT:**
   - Water in gasoline .......................................................... drain old gasoline and replace with new gasoline
     clean carburetor bowl
   - Clogged fuel line ............................................................... check fuel filter
     clean fuel line
   - Vent in fuel cap plugged ........................................................... check vent
   - Faulty fuel pump .............................................................. consult dealer
   - Maladjusted carburetor ................................................... readjust carburetor*
   - Engine dies when Control Lever(s) is move from "neutral" .......................... parking brake set
     release brake

5. **ENGINE KNOCKS:**
   - Low oil level ................................................................. check and add oil
   - Ignition timing off .............................................................. consult dealer
   - Fuel octane too low .......................................................... drain and replace with
     higher octane gasoline
   - Over heated engine ........................................................ shut off engine and allow to cool

* See engine manual for engine adjustments.
6. ENGINE SOMETIMES SKIPS AT HIGHER SPEEDS:
   - Incorrect Ignition Timing .......................................................... consult dealer
   - Carburetor maladjusted ............................................................. readjust carburetor
   - Faulty spark plugs ..................................................................... check spark plug
     condition and reset gap*
   - Bouncing off seat safety switch .................................................. slow down on rough terrain

7. ENGINE OVER HEATED:
   - Air intake screen or fins clogged ................................................. clean intake screen and fins
   - Fuel mixture too lean .................................................................. readjust carburetor*
   - Oil level too low or too high ....................................................... adjust oil level
   - Improper ignition timing ............................................................. consult dealer
   - Running engine too slow ............................................................ run engine faster
     (NOTE: Always mow at full throttle setting.)

8. ENGINE IDLES POORLY:
   - Carburetor maladjustment .......................................................... readjust carburetor
   - Improper spark plug gap ............................................................. check and re-gap plug*

9. ENGINE BACKFIRES:
   - Carburetor maladjustment .......................................................... readjust carburetor*

10. ENGINE RUNS BUT MOWER WON'T MOVE FORWARD:
    - Transmission locks in free wheel position ................................. put in lock position (see pg. 10)
    - Drive belt broken or slipping .................................................... replace drive belt
    - Shift linkage disconnected ........................................................ reconnect
    - Transmission oil low ............................................................... consult dealer
    - Bad transmission ..................................................................... consult dealer

11. TRANSMISSION LOSES POWER OR TRANSMISSIONS OVER HEATS:
    - Transmission damage ............................................................. consult dealer

12. MOWER TRANSMISSION DOES NOT ENGAGE RIGHT AND/OR LEFT HAND:
    - Transmission Free Wheel engaged .......................................... disengage Free Wheel
    - Loose or damage Control Linkage .............................................. consult dealer
    - Low Transmission oil ............................................................. consult dealer

13. ENGINE STALLS WHEN BLADES ARE ENGAGED:
    - Operator not on seat ............................................................... sit on seat
    - Faulty interlock system ............................................................ consult dealer
    - Bad blade spindle bearing ....................................................... consult dealer
    - Deck drive belt not properly routed ........................................ reroute
    - Blades blocked by foreign material .......................................... clean under deck

14. DECK BLADES WILL NOT ENGAGE:
    - Blown fuse ............................................................................. replace fuse
    - Faulty wiring .......................................................................... consult dealer
    - Faulty electric clutch ............................................................. consult dealer

* See engine manual for engine adjustments.
